

# ALARM DETECTION DEVICES

- Additional Keypads - for system operation, panic, and chime alert in remote areas like master bed, basement, front and rear doors, etc.
- Interior Trap Door - provides instant detection alarm for panel room during entry delay timer to deter panel tampering.
- Window/Door Contacts - considered the first line of defense. Wiring only the lower window sash can leave the upper sash vulnerable. Also used on 2<sup>nd</sup> floor openings for alarm as well as for child security and safety.
- Garage Overhead Door Contacts - monitor status of door open or closed with a unique chime alert.
- Motion Detectors - detect a moving heat source in common hallway areas with pet immunity available. Used to backup perimeter protection. (limited coverage)
- Audio Glass Sensors - detect the frequency and shockwave of breaking glass. Used mainly for patio doors, picture windows and sunrooms.
- Stick-On Glass Break Detectors - stick to the surface of the window and detect impact. Used on basement windows and plate glass. (limited coverage)
- Barrier Bars - provide visible protection inside small basement windows and activate upon bar removal.
- Remote Key Fob - fixed or handheld device to arm/disarm system and trigger police in a hold up or forced entry situation.
- Hi/Low Temperature Alert - detects extreme temperature changes in specific location of home or vacant property.
- Sump/Water Level Alert - detects when water is present on basement floor, laundry floor, or in sump pit and sounds alert.
- Carbon Monoxide Detectors - detect harmful CO gases in bedroom or basement areas and sounds an alert. (limited coverage)
- Photoelectric Smoke Detectors - detect the presence of visible or invisible smoke in living areas and sounds the alarm. Considered early warning. (limited coverage)
- Heat Detectors - detect a rapid increase or fixed high temperature caused by fire in attic, laundry, and utility areas. Considered property saving. (limited coverage)
- Zone Expansion Modules - allow for additional zones of detection devices to pinpoint specific areas of entry.
- High Ah Battery - extended system stand by operation time during unusually long power outages. (limited duration)
- Security Cameras - indoor/outdoor viewing and recording with remote capability when traveling. (limited coverage)
- Driveway Vehicle Alert - detects large metal objects/vehicles entering and sounds indoor chime.
- Cut Phone Line Monitor - trips armed security system upon wire tampering in phone interface box.
- Cell Radio Backup - the unit is always ready to communicate emergency signals in the event the phone service is interrupted. Interactive plan available to arm/disarm system via smart phone app with status and trouble email alerts. (limited coverage)
- Central Station Monitoring - a 24-hour service that responds to specific signals received and alerts owner and/or authorities of alarm or trouble condition. Available with daily or monthly test timer to monitor integrity of phone line.

National Security also provides service in the following areas:

- TV installations (wall/cabinet)
- Whole house audio systems
- Home theater setup and installation
- Intercom systems
- Bose™ Built Invisible Dealer
- Central Vacuum Systems
- Telephone Systems/Wiring
- Cable TV/Satellite Wiring
- Hard-wired network jacks
- UPS backup power supplies
